

GGO EXPERT LEVEL, HEAVY FEEDING Vegetative Chart. Not all gardens can handle this extra strength mix. You may want to cut everything in half, except Sensizym, Voodoo Juice, Piranha, and Tarantula. If nutrient solution is in a recirculating system, or stored over a period of days, monitor and adjust pH as needed. Do NOT over-use pH adjusters, as they will kill the active biology. For hydroponics, make sure the water temperature stays below 72 degrees. Keep a submersible pump running in the reservoir to constantly stir nutrient solution. This step aerates the water much more effectively than an air stone, and keeps nutrients properly mixed.

Always Use Dechlorinated water.

Foliar spray twice weekly with Piranha, Thalassa Tonic and Carbo Load.
