

GGO EXPERT LEVEL HEAVY FEEDING FLOWERING CHART

Each product is used at 8ml per gallon, except Piranha and Tarantula (label rate). Not all gardens can handle this extra strength mix. You may want to cut everything in half, except Sensizym, Voodoo Juice, Piranha, and Tarantula. If nutrient solution is in a recirculating system, or stored over a period of days, monitor and adjust pH as needed. Do NOT over-use pH adjusters, as they will kill the active biology. Keep water temperature below 72 degrees. Keep a submersible pump running in the reservoir to constantly stir nutrient solution. This step aerates the water much more effectively than an air stone, and keeps nutrients properly mixed.

<u>Week 1</u>	<u>Week 2</u>	<u>Week 3</u>	<u>Week 4</u>	<u>Week 5</u>	<u>Week 6</u>	<u>Week 7</u>	<u>Week 8</u>
