*For plants that take longer to finish, repeat week 4.

The GGO FLOWER CHART is a program focusing on two main factors: performance and price. Obviously, performance is most important. We all want huge harvests and high quality, and the GGO FLOWER CHART will get it every time. The price point is lower than running the full line of Advanced Nutrients products, so you can grow on a budget. This kit gives you thick roots, heavy yields, and rich flavor/aroma. *And it's easy!!*

All supplements should be used at label rate. The base nutrient, Sensi Bloom, is very strong. Many growers use this product at 1/2 label rate, or even lower. Never use more than the label rate.

There are additional supplements that can be added to this recipe to increase yield and quality. Additions and Upgrades: Tonic, Sensizym, Bud Factor X, Roots (Yellow Bottle), Nirvana, Rhino Skin, Final Phase, Bud Ignitor, Piranha, and Tarantula
